ABSTRACT

The aim of this article is the scientific mapping of Cittaslow-related publications in the Scopus database with the R Studio-Biblioshiny program. The bibliometric analysis method, which is a quantitative research method, was applied in the research. The research method was realized in two steps. In the first step, the Scopus database was searched for title-summary-keywords (TS=(cittaslow OR Cittaslow OR CittaSlow OR CittaSlow OR "slow city" OR "slow cities"). As a result of this search, 182 publications on the subject were accessed. In the second step, the data obtained were analyzed through the Biblioshiny program. These analyses consisted of the analysis of authors, institutions, documents, countries, citations, and words. According to the results of the analysis, there are 182 publications between 2003 and 2024. The number of documents in the Scopus database peaked in 2021. Among the authors, Pink and Jaszczałk have the most publications. The countries with the highest number of publications on slow cities are Turkey, Poland, and the United Kingdom. According to Biblioshiny software data analysis, the most relevant sources are Sustainability, Sustainable Tourism, and Tourism Planning and Development. In addition, thematic maps and statistical data analysis of factorial analyses are visualized. The words with the highest frequency of keywords used in the publications are sustainable development, quality of life, urban development, urban planning, slow tourism, urban areas, and globalization. A word cloud of these words was created. In the wordcloud, the word(s) with the highest frequency value are visualized as larger in font size and the other words are visualized as smaller according to the frequency value and a colorful wordcloud is formed. As a result, by scientifically mapping the publications on Cittaslow in recent years, the existing publications have been evaluated and a road map has been drawn for researchers to get an idea.

Cittaslow (Yavaş Şehir): Scopus Veri Tabanındaki Yayınların, Temaların ve İşbirliği Ağlarının R Studio-Biblioshiny Yazılımı Kullanılarak Bilimsel Haritalanması

Makale Bilgisi

Geliş Tarihi: 12.8.2024

Kabul Tarihi: 12.9.2024

Yayın Tarihi: 30.9.2024

Anahtar Kelimeler:

Yavaş Şehir,
Sakin Şehir.
Bilimsel Haritalama,
Scopus Veritabanı,
Biblioshiny Yazılımı.

ÖZET

Bu makalenin amacı, Scopus veri tabanında Yavaş Şehir (Cittaslow) ile ilgili yayınların R Studio-Biblioshiny programıyla bilimsel haritalanmasıdır. Araştırmada nicel araştırma yöntemi olan bibliyometrik analiz yöntemi uygulanmıştır. Araştırma yöntemi iki adımda gerçekleştirilmiştir. İlk adımda Scopus veri tabanında başlık-özet-anahtar kelimelerinde (TS=(cittaslow OR Cittaslow OR CittaSlow OR CittaSlow OR "Slow city" OR "Slow cities")) arama yapılmıştır. Bu arama sonucunda konuya ilgili 182 yajına erişilmiştir. İkinci adımda ise elde edilen veriler R Studio-Biblioshiny programının aracılığıyla veriler analiz edilmiştir. Bu analizler yazarlar, kurumlar, dokümanlar, ülkeler, atıflar ve kelimelerin analizlerinden oluşmaktadır. Analiz sonuçlarına göre 2003-2024 yılları arasında 182 yayın bulunmaktadır. Scopus veri tabanında doküman sayısı 2021 yılında zirve durumadır. Yazarlardan Pink ve Jaszczałk en fazla yajını olan yazarlardır. Yavaş şehirlerle ilgili en fazla yajını olan ülkeler sırasıyla Türkiye, Polonya ve Birleşik Krallık(UK)'dır. Yajın sayısıyla ön plana çıkan kurumlar Üniversitesi Warmińsko-Mazurski w Olsztynie, Loughborough University, Queensland University of Technology, Dokuz Eylül Üniversitesi, İstanbul Teknik Üniversitesi ve Virginia Politeknik Enstitüsüdür. Biblioshiny yazılımı veri analizlerine göre en ilgili kaynaklar; Sustainability (Switzerland), Sustainable Tourism and Tourism Planning and Development. Ayrıca tematik haritalar ve faktöriyel analizlere ait istatistiksel verilerin analizleri gerçekleştirilmiştir. Yajnlarda kullanılan anahtar kelime frekansı en fazla olan kelimeler sırasıyla sürdürülebilir kalkınma, yaşam kalitesi, kentsel gelişim, kentsel planlama, yavaş turizm, kentsel alanlar ve küreselleşmedir. Bu kelimelere ait bir kelime bulutu oluşturulmuştur. Kelime bulutunda frekans değeri en yüksek olan kelime(ler) yajı puanı olarak daha büyük diğer kelimeler ise frekans değerine göre daha küçük olarak görselleştirilerek renkli bir kelime bulutu oluşturulmaktadır. Sonuç olarak son yıllarda yavaş şehirlerle (Cittaslow) ilgili yayınların bilimsel haritalanması mevcut yajnlar değerlendirilmiş ve araştırmacılar için bir yol haritası çizerek fikir edinmeleri sağlanmıştır.

INTRODUCTION

Cittaslow is a combination of the Italian word "citta" (Italian) and the English word "slow" (Eng.), meaning "slow city" or "calm city". Cittaslow, an international network of cities, creates alternative living spaces where people can socialize and communicate, protect their unique culture and nature, and create sustainable cities that are self-sufficient, have no infrastructure problems, and use renewable energy sources. The Cittaslow movement and philosophy are rapidly spreading around the world. Every year, many towns and cities realize their Cittaslow membership goals and the number of members is increasing. To achieve "slow city" status, a city needs to adopt the Slow Food rules and work to protect the local environment and improve socialization. Once a city becomes a Slow City, some of the Slow City goals can become part of the city's heritage. But other changes can always be introduced and implemented—often inspired by programs implemented in other cities (Cittaslow, 2024). The Cittaslow Movement's organizational structure consists of a coordination committee with decision-making responsibilities, a scientific committee, which is responsible for setting the movement's guidelines and serves as an organ control office, and a secretariat, which oversees all operational aspects of the activities both nationally and internationally (Cittaslow, 2024).

Cittaslow philosophy advocates living at a pace that is enjoyable to live at. It advocates that cities where people can communicate with each other, socialize, be self-sufficient, and sustainable, preserve their handicrafts, nature, traditions, and customs, but at the same time have no infrastructure problems, use renewable energy sources, and benefit from the convenience of technology can be a real alternative. The Cittaslow manifesto, which focuses on the philosophy of slowing down for a better life, states (Figure 1): "We are looking for towns where people are still curious about the old times, full of theaters, squares, cafes, workshops, restaurants, and spiritual places, with unspoiled landscapes and fascinating artisans, where people can still recognize the slow flow of the seasons and their unique products, pleasures, health, and spontaneous traditions..." (source: Cittaslow Manifesto).

Figure 1

Cittaslow Manifesto (Cittaslow-manifesto, 2024)

Literature Review of Cittaslow

In recent years, the number and quality of Cittaslow research have been increasing. Some of these publications focus on "population aging and the potential for developing a silver economy"

(Wierzbicka and Farelnik, 2024), "social change encouraging or discouraging support for Cittaslow development" (Küçükgerin et al., 2024), "evaluating the success of the development strategy of the Cittaslow movement (Jaszczak et al., 2024), Cittaslow through the lens of sustainable urban development" (Özcan Alp, 2024), "the effects of cities' membership in the Cittaslow network" (Wierzbicka & Mociun, 2024), and "social change in cities after joining the Cittaslow association" (Özdemir, 2024). The most cited publications are Knox (2005), Mayer & Knox (2006), Lumsdon & McGrath (2010), Pink (2008), and Ulmer (2007) in the Scopus database (Scopus, 2024). The most recent publications on slow cities are Jaszczak et al. (2024), Li et al. (2024), Demir et al. (2024), Klarin et al. (2024), and Stanowicka et al. (2024) in the Scopus database. In addition to these documents, the following publications stand out in the Scopus database: Mazur-Belzyt, 2017; Barnas et al., 2019; Zagroba et al., 2020; Bernat & Flaga, 2022; Uysal Urey, 2023; Musiaka et al., 2023; Zagroba, 2024.

Publications on Cittaslow in the fields of architecture, urban design, and urban regional planning are Mayer & Knox (2006), Radstrom (2014), Semmens & Freeman (2012), Raco et al. (2018), Senetra & Szarek-Iwaniuk (2020), Servon & Pink (2015), Özmen & Can (2018), Ince et al. (2020), Varolgüneş & Canan (2018), and Saricaoglu & Tanaç Zeren (2013), Donaldson & Donaldson (2018), Donaldson (2021), Pink (2008, 2009), Pink & Lewis (2014), Servon & Pink (2015), and Zielinska-Szczepekowska (2021).

Cities wishing to become members of the Cittaslow Union must have a population of less than 50 thousand. There are also various criteria for membership. The projects implemented by candidate cities to fulfill the criteria are scored. For a candidate city to be approved for membership, it must score 50 points or more.

Cittaslow Union membership criteria are grouped under 7 main headings (Cittaslow, 2024):

1. Environmental Policies (12 criteria)

(Parks and green spaces, renewable energy, transportation, recycling, etc.)

2. Infrastructure Policies (9 criteria)

(Alternative transportation, bicycle lanes, street furniture, etc.)

3. Urban Quality of Life Policies (17 criteria)

(Re-characterization and re-use of marginal areas, wired network city (fiber optic, wireless), etc.)

4. Agricultural, Touristic, Tradesmen and Craftsmen Policies (10 criteria)

(Banning GMOs in agriculture, increasing the value of working techniques and traditional handicrafts, etc.)

5. Plans for Hospitality, Awareness and Education (10 criteria)

(Good reception, increased awareness of operators and traders (transparency of offers and applied prices, clear visibility of tariffs), etc.)

6. Social Cohesion (11 criteria)

(Integration of persons with disabilities, poverty, discrimination of minorities, etc.)

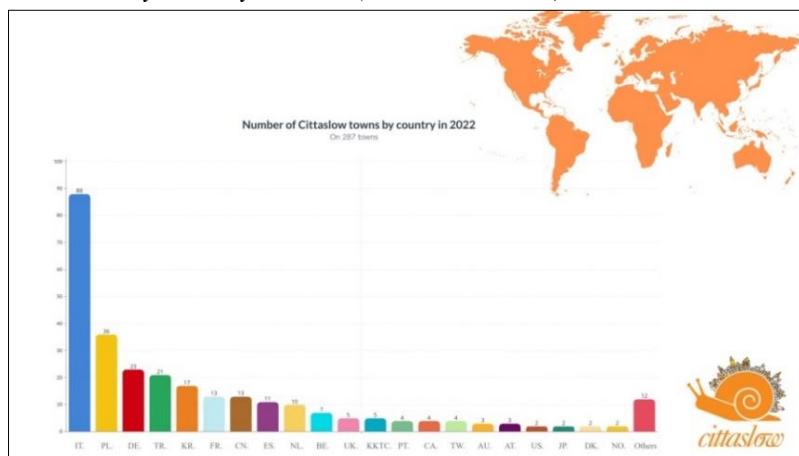

7. Partnerships (3 criteria)

(Cooperation with other organizations promoting natural and traditional food, etc.)

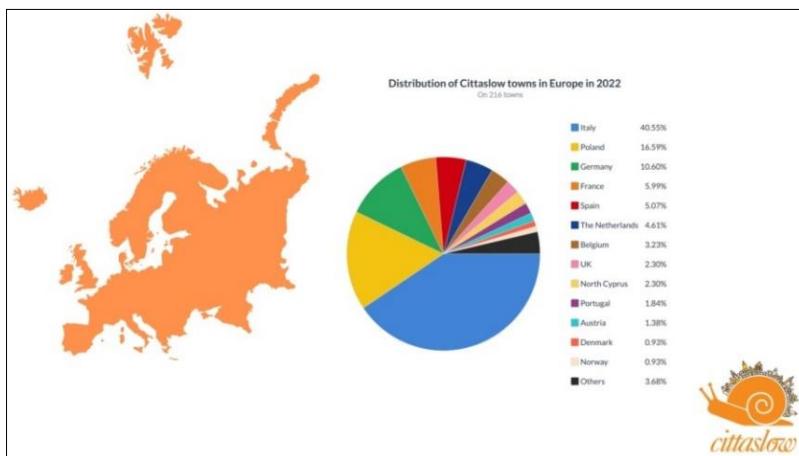

Figure 2 shown number of Cittaslow towns by country in 2022 but in 2024, these numbers have increased 33 countries and territorial areas, 301 cities, 20 network (Cittaslow, 2024). Figure 3 shown distribution of Cittaslow towns in Europe in 2022; Italy 40.55%, Poland 16.59%, Germany 10.60%, France 5.99%, Spain 5.07%, Netherlands 4.61%, Belgium 3.23%, UK and North Cyprus 2.30%, Portugal 1.84%, Austria 1.38%, Denmark and Norway 0.93%, others 3.68% (Cittaslow, 2024). Figure 4 shown distribution of Cittaslow towns in Asia in 2022; Turkey 36.84%, Corea 29.82 %, China 22.81 %, Taiwan 7.02 % and Japan 3.51 % (Cittaslow, 2024) (Figure 4).

METHODOLOGY OF RESEARCH

The research methodology is based on bibliometric analysis. The current sources for the literature review on bibliometric analysis are as follows ;(Çiloglu et al., 2021; Tosunoğlu et al., 2021;

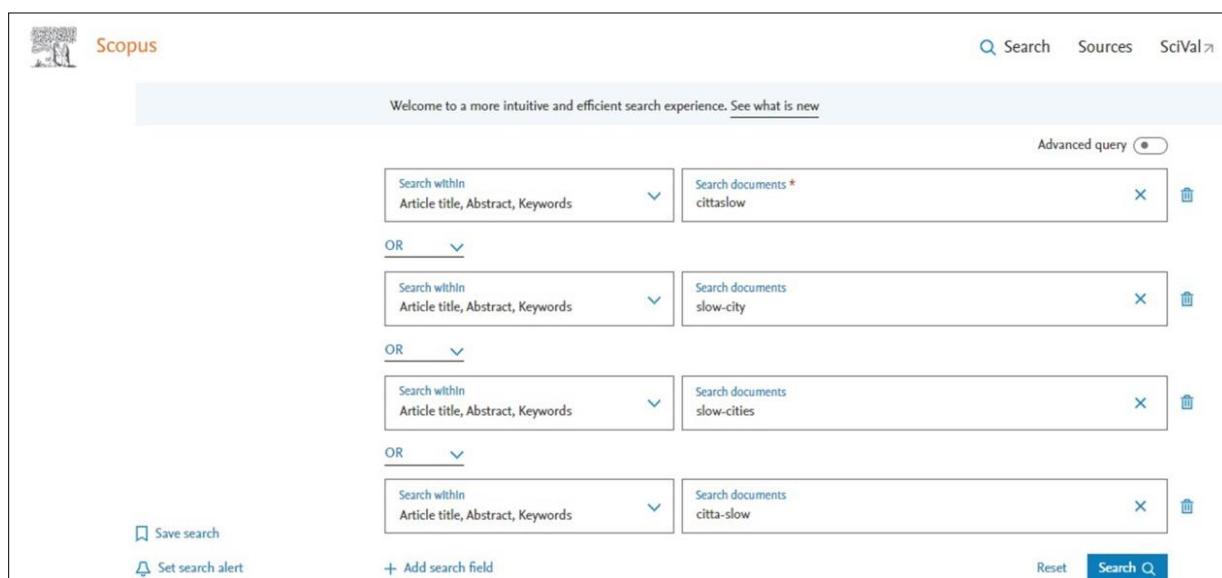

Yurt, 2022; Tekin & Karip, 2023; Karakuş, 2024; Adamczak et al., 2024) have utilized bibliometric analysis in various scientific fields. Biblioshiny software, VOSviewer, SciMat, and CiteSpace are examples of software packages used to examine bibliographic data in scientific investigations of urban design, urban and regional planning, and planning (Alsayed, 2024; Bagheri et al., 2024; Baidya et al., 2024; Okour et al., 2024; Kattimani & Devadas, 2024). Several research on Cittaslow have used the bibliometric analysis method (Mavric et al., 2021; Garda, 2022; Burkut, 2023; Uçuk, 2023; Klarin et al., 2024).

Data Collection Prosesse

Figure 5 shows the research methodology for data collection in the Scopus database (Scopus, 2024). Search within: Article title, Abstract, Keywords and Search documents: cittaslow OR slow-city OR slow-cities OR citta-slow (Figure 5).

Figure 5

Research Methodology on Data Collection in Scopus Database (Scopus, 2024)

Data Analysis Process

The following steps were followed in the data analysis process of this study. In the first step, the data downloaded from the Scopus database were opened in the R Studio Biblioshiny software interface to check the accuracy of the information (Bibliometrix, 2024). In the second step, main information about data and bibliometric metadata tables were created. These data contain statistical and numerical ratios of all publications. In the third stage, most relevant words, wordcloud about Cittaslow, word list/occurrence frequency, factorial analysis, and thematic map (density/centrality) analysis were visualized in R Studio-Biblioshiny software.

RESULTS

The conclusion section is explained in two steps. The first step is the analysis results of the data obtained from the Scopus database and the second step is the analysis results of the R Studio Biblioshiny software.

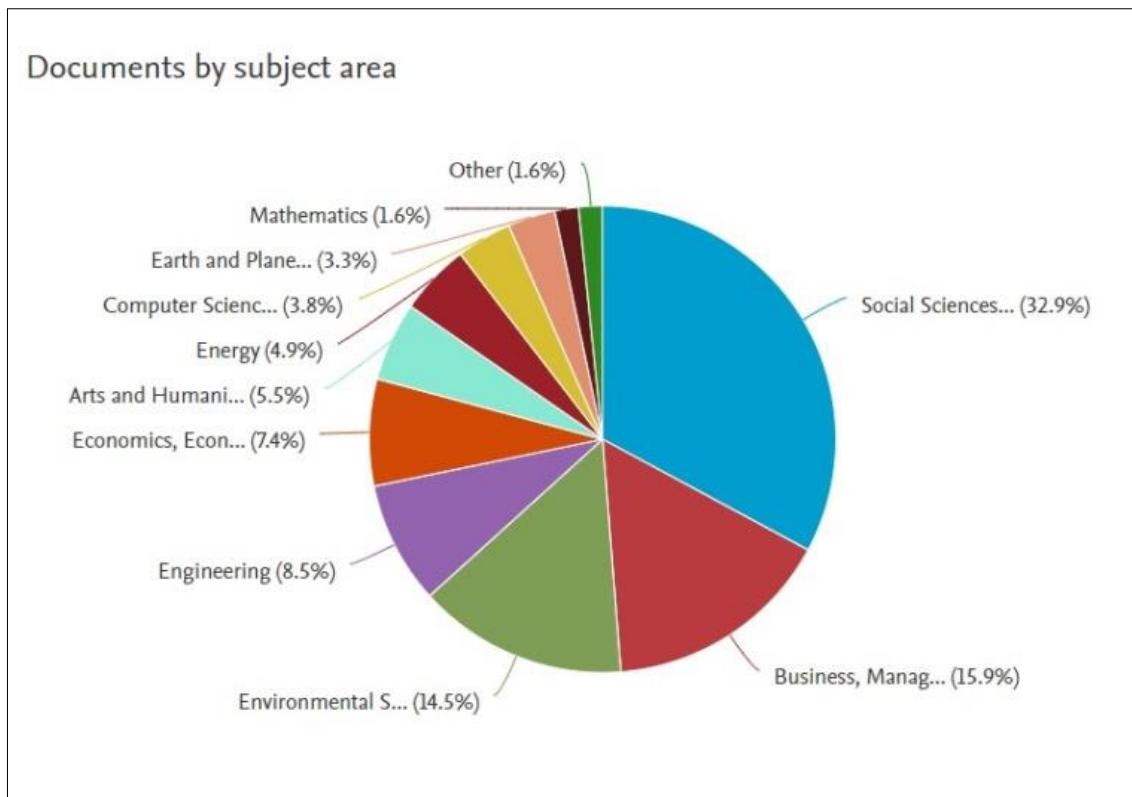

Results from Scopus Database

In this section, Scopus database documents are visualized and analyzed by subject area (Figure

6), country or region (Figure 7), document type (Figure 8), affiliation (Figure 9) and year (Figure 10). This section's analytical findings and visuals were from the Scopus database (Scopus, 2024).

ASSESSMENT AND DISCUSSION

To summarize the contributions of the research findings to the fields of architecture, design, urban design, urban and regional planning;

- The "Social Science" subject area has the highest number of publications until 2024. In addition, "Business, Management, and Accounting" are ranked second, with "Environmental Science" ranking third position.
- The majority of publications are articles.
- According to Elsevier Scopus database statistics from 2024, 2021 had the most publications.
- This research involved analyzing 182 documents. These documents were released from 2003 until 2024.
- Authors' trend keywords in publications include "cittaslow", "slow cities", "slow", "city", "cities", "sustainability", "slow tourism", "quality of life", "slow food", "small town", and "sustainable tourism".

- The most relevant sources include "Sustainability," "Journal of Sustainable Tourism," and "Tourism Planning and Development."
- Turkey is ranked top in terms of number of publications. Poland and the United Kingdom are the countries with the most publications.
- The nation's most frequently cited are the United States (US), United Kingdom (UK), Poland, and Turkey.

CONCLUSION AND RECOMMENDATION

In this study, a bibliometric evaluation is used to provide a general perspective on Cittaslow (slow cities) which is then, interpreted using quantitative data. The research data is limited to the Scopus database. Data collection dates are limited to June 1-14, 2024. Slow city research was studied using numerical data and statistics to give an objective point of view. With the advancement of technology in recent years, digital data and software applications are preferred over human data entry.

This article's contribution and originality to the field are the interpretations of statistical data to provide an extensive viewpoint for Cittaslow. Furthermore, the software allow for the simultaneous execution of many analyses. Scientific mapping and bibliometric analysis studies have advantages that have been increasingly popular in recent years. Accessing, analyzing, and interpreting data for researchers and academics helps science because of several benefits. By imposing some constraints on these studies, it is feasible to produce a more focused publication that includes year, author, and institution or subject limitations.

While the number of new Cittaslow members increases year after year, the improvement of the quality of life and the slow eating of lives accelerated by globalization. Slow and sustainable tourism offers slow access on foot or by bicycle and solutions to improve the whole life of individuals and the quality of life. Cittaslow (slow cities) have been put forward to solve many problems, such as fast life, fast food, and fast consumption with globalization. The concept and philosophy of slow cities is an interdisciplinary issue that concerns architecture, planning, urban design, tourism, food, and local governments to increase the quality of life in a more livable, accessible, and quality of life.

Ethical Approval

Ethics Committee Certificate is not required for this study.
